EDUCATION

University of Maryland

Bachelor of Science in Computer Science

College Park, MD

May 2027

Course Work: Object Oriented Programming, Discrete Structures, Intro to Computer Systems, Organization of Programming Languages, Introduction to Compilers, Introduction to Data Science, Databases, Algorithms/Data Structures, Statistics, Calculus I/II/III, Linear Algebra, Computer Architecture, Intro to Probability Theory

EXPERIENCE

NSF I-CORPS Hub Mid-Atlantic Region

Backend Developer Intern

June 2026 – Present

College Park, MD

- Engineered backend infrastructure using FastAPI, creating modular routers, RESTful APIs, and WebSocket pipelines for real-time communication
- Designed relational database systems with SQLAlchemy ORM, defining models and schemas while managing migrations through Alembic
- Built data persistence workflows using Redis and AWS S3 object storage to enable efficient retrieval of application resources
- Integrated backend endpoints with React frontend applications through JavaScript service layers and collaborated across the full-stack development pipeline

Hardware & Lumber Limited

Software Engineer Intern

June 2025 – August 2025

Kingston 11, Jamaica

- Engineered a Python + SQL data pipeline querying IBM iSeries S2K databases to compute dynamic reorder points and trigger automated stock alerts for 30+ managers nationwide
- Developed and deployed a Google Sheets extension in JavaScript that automated multi-sheet quote generation and populated Google Docs templates, streamlining customer order processing
- Saved 50+ labour hours and \$2,000 in cost by processing a backlog of over 600 quotes across retail locations.
- Built a Python tool using Pillow to batch process network-stored images and sync them to iSeries storage, reducing load times and file size by 60%
- Packaged and deployed the utility as a standalone Windows installer via Inno Setup for scalability

Children's National Hospital

Full Stack Engineer Intern

February 2025 – May 2025

College Park, MD

- Built a FastAPI backend service to integrate a brain scan ML model into the hospital platform, enabling automated medical image processing and API-based inference using Numpy and Nibabel
- Built a responsive, paginated web interface for data visualization using React, FastAPI, and Supabase
- Implemented a secure registration system with user authentication via Supabase and React Router DOM
- Collaborated in a 15-member Agile development team using Git to build and ship production React components

PROJECTS

Google Gemini Hacks - Talk To Me (2nd Place Winner)

Full Stack Engineer & AI Developer

November 2025 — November 2025

College Park, MD

- Built a Node.js/Express backend integrating the Gemini 2.5 Flash API with tailored system prompts for three therapist personas
- Implemented session memory using secure cookie-based IDs and an in-memory context layer for consistent conversational consistency
- Developed the React chat pipeline with localStorage-based client-side persistence for private, in-browser AI interaction

TECHNICAL SKILLS

Languages: Java, Python, C, JavaScript, TypeScript HTML/CSS, R, Assembly, Ocaml, Rust, SQL, VBA, Postgres SQL

Frameworks & tools: Git, React, JUnit, FastAPI, MongoDB, Supabase, Pandas, NumPy, Nibabel

AWARDS

Health and Wellness Award, Gemini Hacks - November 2025

RazzleDazzle Award, Bitcamp - April 21, 2024

Nationals Second Place, World Robotics Olympiad - October 2018

OMSE Academic Excellence Award - Nominee for 2024

Creativity, Activity and Service Honor Award - Acting Director Lori Ann MacMillan-Thompson - June 2023

Citizenship Award - Guidance Counselor Hopal McClintock - June 2023
